

MEMORANDUM

TO: Pennsylvania Senate Law & Justice Committee

FROM: Elizabeth Randol, Legislative Director, ACLU of Pennsylvania

DATE: October 17, 2025

RE: OPPOSITION TO SB 912 P.N. 1088 (FARRY)

Bill summary: Pennsylvania currently collects DNA samples from people convicted of hundreds of different crimes. [SB 912](#) (PN 1088) would expand DNA collection to require anyone **arrested for or charged with** one of those offenses, many of which are non-violent crimes, to submit a DNA sample to police—including samples from juveniles. [See the DNA collection comparison chart below.](#)

On behalf of over 100,000 members and supporters of the ACLU of Pennsylvania, I respectfully urge you to oppose Senate Bill 912.

SB 912 threatens the protections afforded by the Constitution and flagrantly ignores the need for heightened vigilance whenever law enforcement expands its investigatory arsenal.¹ The dangers of the massive expansion of DNA collection proposed under SB 912 fall roughly into four categories: (1) constitutional threats; (2) sprawling scope of covered offenses; (3) privacy invasions and government surveillance; and (4) massive unfunded mandate.

1 | CONSTITUTIONAL THREATS

a | SB 912 would undermine the presumption of innocence by collapsing distinctions between pre- and post-conviction.

It is a cardinal principle of our criminal legal system that every person accused of a crime is presumed to be innocent unless and until guilt is established beyond a reasonable doubt. This presumption is not a mere formality, it is a “basic component of a fair trial under our system of criminal justice”² guaranteed by the right to due process under the Fifth and Fourteenth Amendments.

Putting arrestees in criminal DNA databases turns the presumption of innocence on its head by making individuals who haven’t been convicted of any crime into permanent suspects. It erases one of the most meaningful bright line distinctions in our system of justice—conviction—and would instead treat anyone arrested as presumptively guilty of “something” and therefore subject to compulsory genetic surveillance.

b | SB 912 would establish a system of suspicionless and warrantless searches of people’s genetic data.

Since [Maryland v. King](#), in which the Supreme Court held that police may collect DNA from people who have been arrested for—but not yet convicted of—a crime,³ police have had free reign to collect DNA from arrestees, while enjoying unconstrained latitude to warrantlessly collect DNA from any member of the public.

¹ See, e.g., [Olmstead v. United States](#), 277 U.S. 438, 479 (1928) (“Experience should teach us to be most on our guard to protect liberty when the Government’s purposes are beneficent....The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well-meaning but without understanding.”).

² [Estelle v. Williams](#), 425 U. S. 501, 425 U. S. 503 (1976).

³ [Maryland v. King](#), 569 U.S. 435, 465–66 (2013).

The Fourth Amendment requires a warrant, supported by probable cause, in order for a search to be legitimate.⁴ Probable cause requires a police officer's reasonable belief that either "an offense has been or is being committed,"⁵ or that evidence of a crime will be found in the place searched,⁶ and particularly with respect to "the place to be searched, and the persons or things to be seized."⁷

Proponents of expanding DNA collection argue that society's interest in criminal investigations is paramount and therefore justifies a maximalist approach to DNA collection. Undoubtedly, crime victims and the public at large have a high interest in solving crimes and protecting public safety. But the Fourth Amendment has always demanded a balancing of this interest against civil liberties, ever since the Founders recognized and "reviled" the "evils" of unconstrained government searches and surveillance.⁸

DNA collection at arrest allows the government (1) to take DNA from people arrested, (2) often for crimes where no DNA is present, to (3) query whether it matches DNA connected to a separate crime in the database for which (4) law enforcement has *no probable cause* to suspect the arrestee of committing. **Pre-conviction DNA collection is therefore baseless**—it neither requires suspicion nor a warrant to run a sample through a database in the hopes of discovering a "hit" (or match) to another crime.

If enacted, SB 912 would permit the government to use a single arrest as blanket "probable cause" to investigate the arrestee for a multitude of other crimes, past and future, without any showing of individualized suspicion or exigent (emergency) circumstances.

2 | SPRAWLING SCOPE OF COVERED OFFENSES

SB 912 would allow DNA to be seized from people arrested for an unjustifiably broad list of offenses.

Perhaps the most misleading statistic repeated by supporters of pre-conviction DNA collection is the reference to the number of other states that permit it. While that generally may be true, Pennsylvania would stand alone in the staggering number of offenses subject to DNA seizure.

SB 912 reaches far beyond taking DNA from people arrested for "violent crimes" to include: all felonies, criminal homicide, sex offenses, and all first-degree misdemeanor offenses in Title 18—**hundreds of offenses**, most of which are non-violent crimes. If that wasn't enough, SB 912 goes even further to include inchoate offenses—the "attempt, conspiracy or solicitation to commit" any of the hundreds of offenses—to pre-conviction collection. This will capture the vast majority of people arrested in PA—a breathtakingly brazen genetic surveillance program fed by a dragnet collection requirement.

3 | PRIVACY INVASIONS & GOVERNMENT SURVEILLANCE

a | DNA is NOT like a fingerprint.

Defenders of pre-conviction DNA collection often frame privacy concerns in terms of the method of collection, arguing that a cheek swab is minimally invasive and not much different from fingerprinting, justifications echoed by the sponsor of SB 912. However, the privacy invasion at issue is the content of the collection, not the method. DNA contains your genetic code—the most intimate, private information about you and your

⁵ Brinegar v. United States, 338 U.S. 175-76 (1949).

⁶ Texas v. Brown, 460 U.S. 730, 742 (1983).

⁷ U.S. Const. amend. IV.

⁸ Riley v. California, 573 U.S. 373, 403 (2014) ("[T]he Fourth Amendment was the founding generation's response to the reviled 'general warrants' and 'writs of assistance' of the colonial era, which allowed British officers to rummage through homes in an unrestrained search for evidence of criminal activity.").

family. Like DNA, a fingerprint can identify a person, but unlike DNA, a fingerprint says nothing about the person's health, their race and gender characteristics, predisposition for particular disease, and perhaps even their propensity for certain conduct.

b | DNA is inherently relational, so any invasion of genetic privacy implicates innumerable others.

Unlike fingerprints, DNA is relational. Invasions of genetic privacy are not limited to the individual. The relational nature of the data contained in our DNA means that an intrusion on one person's privacy may facilitate the intrusion of another person's privacy,⁹ such that those whose DNA has not been collected may nevertheless be identified through relatives as distant as third cousins whose genetic information has been collected¹⁰—a harm most apparent in investigative genetic genealogy.¹¹

c | DNA data breaches are unique in that they are irretrievable.

A single breach of a biometric database is an exceptionally catastrophic breach. Not only does it spill the most sensitive information about **you and your family** to anyone able to access it, but it's also irretrievable—because while you can change a password, you can't change your DNA.

d | The failure to provide automatic expungements will bolster an indefinite surveillance apparatus.

Not only is genetic surveillance often baseless, it is also often indefinite, because local law enforcement is free to set their own parameters for retention and expungement.¹² And SB 912's expungement provisions would all but guarantee the greatest number of DNA samples languish indefinitely in the state's databases. Unlike many other states, Pennsylvania would not offer automatic expungement (odd, given the broad bipartisan support for automatic record clearing under [Clean Slate](#)). SB 912 allows expungement, but the burden falls on individuals to petition the court to remove their DNA, including those who were arrested but not charged, charged but acquitted, had charges dismissed, filed outside the statute of limitations, or declined for prosecution, had DNA collected for an unauthorized charge, or even had police take their DNA "by mistake".

Indefinite surveillance is a harm in itself, but is further compounded by the harm flowing from suspicionless collection. Law enforcement and private actors have embraced genetic data maximalism, assembling vast, interconnected troves of intimate genetic information that may be searched and used indefinitely, even in ways completely attenuated from the initial DNA collection. And the stakes of indefinite, suspicionless surveillance are high—surveillance "can chill the exercise of civil liberties," and impose a "power dynamic between the watcher and the watched" which "creates the risk of a variety of harms, such as discrimination, coercion, and the threat of selective enforcement."¹³

e | Expanded DNA collection puts communities of color under heightened genetic surveillance.

The expansion of forensic DNA collection under SB 912 will exacerbate the biases and structural racial inequalities embedded in our criminal legal system. People of color are disproportionately represented at every phase of the criminal legal system—they are routinely suspected, stopped, searched, arrested, and convicted at disproportionately higher rates than their white counterparts. And because law enforcement has been given wide latitude to decide who to target for sample collection and inclusion, "police [often] seek out

the ‘usual suspects’—poor people of color—to secure DNA samples for these databases,”¹⁴ thus subjecting them to a higher degree of surveillance.

4 | MASSIVE UNFUNDED MANDATE

SB 912 amounts to a massive unfunded mandate that will bloat state DNA databases.

Heedless expansion of DNA databases overwhelms crime labs and diverts time and other resources away from proven investigative techniques. Pennsylvania DNA databases are already backlogged and crime victims are often forced to wait too long for evidence from their crime to be processed. From 2014-2023, Pennsylvania agencies have received millions in federal funding to tackle their existing post-conviction DNA backlogs, totaling over [\\$12.5 million](#) to the Pennsylvania State Police, over [\\$9.8 million](#) to the city of Philadelphia, and nearly [\\$3 million](#) to Allegheny County.

Moreover, the decentralized assemblage of DNA databases, combined with variations in the quality of collection, search, and storage methods may compound backlogs, exacerbate instances of missing evidence, and increase the chances of wrongful convictions.¹⁵ **In other words, to the extent SB 912 aims to solve crimes, help victims, and maintain conviction integrity, it would likely do the opposite.**

And to pay for all this, SB 912 comes up woefully short. SB 912 would expand the current mandatory \$250 fee imposed on those *convicted* of a covered offense, but is silent on how the state will pay to analyze and store samples from the tens of thousands of people arrested every year. This would leave the state with only two options:

1. Impose the mandatory \$250 fee on everyone arrested, which would have catastrophic consequences for those unable to pay, while compounding the disproportionate effects on defendants of color; or
2. Appropriate money to the [DNA Detection Fund](#)¹⁶ from the General Fund. In 2022, the DNA Detection Fund had a balance of approximately [\\$6 million](#)¹⁷ provided by the mandatory fees imposed on people convicted. This amount does not adequately cover DNA-related expenses, so the legislature should expect to appropriate many millions more to fund collection at arrest.

SB 912 proposes a massive expansion of genetic surveillance—seizing DNA from people who are presumed innocent under the law, turning them into permanent suspects. Authorizing law enforcement to accumulate genetic data from people—without a warrant—flies in the face of our most foundational constitutional principles. People who have been arrested but not convicted are innocent until proven guilty. They have the right to due process of law. They have a right to be free from unreasonable searches and seizures. They have a reasonable expectation of privacy. And when it comes to privacy, there isn’t anything more personal than our genetic information. And since Black and brown people are overpoliced and disproportionately arrested, mass DNA collection will put communities of color under heightened genetic surveillance. Finally, pre-conviction DNA collection is not only costly, but would overwhelm Pennsylvania’s forensic DNA caseload and add to existing backlogs—hardly a plan to bring “closure to victims” or keep Pennsylvanians safer.

For these reasons, we urge you to oppose Senate Bill 912.
