Dear Chief Executive Officer:

In recent years, the number of schools teaching abstinence-only-until-marriage curricula has increased. Research shows that these programs are ineffective. Abstinence-only curricula omit crucial information young people need to prevent pregnancy and protect themselves from sexually transmitted diseases (STDs). We urge you to evaluate your current life-skills and sexuality education curriculum and ensure that it provides medically accurate and unbiased information.

Abstinence-only-until-marriage curricula often misrepresent the effectiveness of contraceptives, giving teens the false impression that condoms neither protect against STDs nor prevent unintended pregnancy.ⁱⁱⁱ This is particularly troublesome given that each year in the United States nearly 9.1 million 15-24 year olds are infected with an STD^{iv} and more than 800,000 teenagers become pregnant.^v

In short, abstinence-only-until-marriage programs do not work. Comprehensive sexuality education does. Comprehensive programs are supported by major medical and educational organizations, including the American Medical Association, the American Academy of Pediatrics, the Society for Adolescent Medicine, the American College of Obstetricians and Gynecologists, and the National Education Association. In addition, public opinion polls consistently show that over 85% of Americans support comprehensive sexuality education over an abstinence-only approach, beginning in middle school.^{vi}

Records indicate that some districts in Pennsylvania use problematic abstinence-only curricula as identified in a recent congressional report – including Choosing the Best; WAIT Training; Friends First/STARS; Me, My World, My Future; Sexual Health Today (Medical Institute for Sexual Health); Project Reality's Navigator; and A.C. Green's Game Plan.

We call on you as your charter school's CEO to ensure that the health and sexuality curriculum in your school presents medically accurate, age-appropriate, unbiased information about sex and sexuality. If you would like assistance identifying science-based sexuality education programs to use in your school, please contact Joe Fay at the Pennsylvania Coalition to Prevent Teen Pregnancy at 717.761.7380 x3100. The PCPTP can direct you to science-based educational programs that are recommended by the National Campaign to Prevent Teen Pregnancy.

Thank you for your attention to this important public health matter.

Sincerely,

[see attached list]
